

# Alchemy CATALYST Advanced Training Course

## Introduction

The Advanced course builds on the knowledge obtained in the Standard course to give the trainee an in-depth understanding of Catalyst's features and covers all filetypes supported by Catalyst.

## Course/module Description

The Alchemy CATALYST Advanced Course has two main aims:

- i. This course aims to give the user who already has a reasonable knowledge of Catalyst the skills necessary to use its more advanced features.
- ii. The Catalyst Standard Course mainly covers Windows 32 binaries, this Advanced Course builds on this to cover all other filetypes that can be localised using Alchemy Catalyst.

## Training topics

Advanced features of Catalyst:

- i. Ezparse for creating text parsing rules using regular expression parsing.
- ii. Ezscript for automation of localisation tasks such as creating ttks, leveraging, validation, extraction etc.

How to use Catalyst to localise:

- i. .Net 1 and 2 (resx and binaries) and the differences between .Net and Windows 32 localisation
- ii. XML
- iii. HTML and .asp
- iv. Databases
- v. XLIFF
