

Module 4 TERMINOLOGY: METHODOLOGY AND PRODUCTION

Introduction

To increase productivity and quality in translation and localization projects it is essential to systematize the terminology production based on previously defined methods and criteria.

Course/module Description

Introduction to basic concepts of terminology, terminology management, the different phases of terminology production and the software used for the management of terminological entries. During a **TermStar XV** (Terminology Management System) workshop, all the previously acquired theory will be put to practice.

The workshop is based on real-life examples of terminology management in translation and localisation projects.

Training topics

- Terminology, terminography and terminotics
- Terminography vs. lexicography
- Term and concept
- Relevant terminological data for localization projects
- Phases of terminography production
- Workshop: Building terminology entries with a terminology management Systems (TermStar XV)
