

# **Localisation Process 2**

## **Introduction**

The module is designed for students that have already completed the module 'Localisation Process 1' and who have a basic knowledge of what is involved in software localisation. This module will expand on the knowledge acquired in the previous module and further prepare them for work in the localisation industry.

## **Course/module Description**

In this module the students will take a more in depth look at software localisation and will examine each step of the localisation process in detail. They will learn how to manage localisation projects and will also gain an insight into the importance of quality in the localisation process. In one of the main components of this module the students will gain practical experience by separating into project groups (comprised of project manager, engineer, translator and quality specialist) and undertaking the localisation of a custom application using industry standard tools and methods.

## **Training topics**

- Project Management
- QA/testing
- Publishing
- Software publisher case study
- Service provider case study.
- Localisation project
